

ZADANIE

A simple comments page.

A possibility to register/login user (for the purposes of this test -> store only in localStorage/sessionstorage - no DB needed)

Only a logged in user can add comments, others (not logged in users / guests) can only see comments.

Comments create a tree structure, so that anybody can reply to any comment and the reply is 'attached' as subtree to the comment it was replied to

After button to 'Add Comment' is clicked a new worker is started that checks the comment for inappropriate words defined in a JSON file

if it contains any inappropriate word in any form, then the comment is blocked and a message appears for the user, that he cannot use the word

if it does not contain any inappropriate words the comment is added with timestamp to correct node The inappropriate words JSON contains words ['Putin', 'Ukraine', 'Russia', 'War'].

It is possible to use only pure HTML/CSS/JavaScript, no frameworks.

The page should be optimized for screen resolution 1920x1080, aligned in the middle using 70% of width (15% empty space on each side)

The background color should be #F5F5F5

The font-family should be 'Lucida Handwriting'

The font size should be 18px

The 'Reply' button should have a background color #FFFFFF with text color #00325A, hover effect the opposite colors

The 'Add Comment' button should have a background color #FFFFFF with text color #DE5050, hover effect the opposite colors

The message saying the user cannot use wording in the comment should have a text color #FF8300
